R. B. Waina

Industrial Engineering Department
Arizona State University

This work was supported by the Industrial Engineering Department at Arizona State University and by a grant from Arizona State University.

This Index has been distributed without charge to all who were senior chapter members of AIIE on April 1, 1968. Individuals who joined AIIE after that date and those desiring additional copies may obtain them for $2.00 each. Price to libraries and educational institutions is $2.00. Price to all others is $4.00.

*Now Academic Vice President, Florida Technological University.

FOREWORD

During its twenty-year history, from 1948 through 1967, AIIE has made ever-increasing contributions to the Industrial Engineering literature. Indeed, the very volume and diversity of these publications have gradually created a new need. Industrial Engineers, researchers and practitioners alike, are experiencing difficulty in locating published material relevant to their problems. AIIE believes that Cumulative Indices to the Journal of Industrial Engineering and the Annual Conference Proceedings will serve as helpful guides for those who are seeking specific Industrial Engineering information.

Through the generosity of Arizona State University, and due, especially, to the dedicated efforts of W. E. Lewis, C. B. Gambrell, and R. B. Waina of that institution, AIIE has been provided with computer print-outs of Cumulative Indices of the Journal of Industrial Engineering (1949-1967) and the AIIE Annual Conference Proceedings (1954-1967). In all, 106 issues of the Journal and 14 volumes of the Proceedings, containing more than 1,500 technical and professional articles, have been indexed. As a service to the Industrial Engineering profession, AIIE is publishing these indices in this booklet.

Suggestions for additions, corrections and other improvements should be directed to my attention. They will be appreciated.

Back issues of the Journal of Industrial Engineering are available on microfilm or Xerox copy from University Microfilms, 300 North Zeeb Road, Ann Arbor, Michigan 48106.

On behalf of the American Institute of Industrial Engineers, I express our sincere appreciation to Bill Lewis and his colleagues for an outstanding contribution to the profession.

Roger P. Denney, Jr.
Editor-in-Chief
AIIE Publications

April, 1968

INTRODUCTION

These Indices are designed to aid in conducting literature searches in Industrial Engineering by supplying, in a single document, a categorical listing of the major articles which have appeared in the Journal of Industrial Engineering and the AIIE Annual Conference Proceedings. For simplicity, these two publications have been indexed separately.

The coding system used is a modification of the one used for AIIE Research Abstracts, published annually in the Journal. In order to guide the user directly toward his specific areas of interest, 115 subject areas have been included in the classification system. Articles usually appear under more than one category; however, care has been taken to assure that an article is listed under only those categories which are appropriate. Certain portions of the Journal appear on pages designated by Roman numerals and on the inside covers. In cases where such articles were deemed of sufficient technical interest that they should be indexed, Arabic page numbers, corresponding to the relative positions of those articles within the respective issues, were assigned.

We were unable to locate Proceedings for the first four Annual Conferences of AIIE. The Proceedings of the Ninth Annual Conference were published in the September-October 1958 issue of the Journal. These articles may be found in both the Journal and Proceedings Indices.

HOW TO USE THIS INDEX

Suppose you are seeking information on Work Sampling. Enter the Table of Contents at the major heading entitled Work Measurement (opposite page). Scanning down several lines, you will find the subheading, Work Sampling. The Table of Contents indicates that articles on Work Sampling (code 160) may be found on pages J-7 (Journal articles) and P-3 (Proceedings articles). Turning to page J-7, you find a listing of all the Work Sampling articles published in the Journal through 1967, a total of 34. The first article on the list (most recent) appeared in the July 1967 issue on page 457. It is entitled "Extracting More Information from a Work Sampling Study," and it was written by R. W. Fenske. (Actually, the July 1967 issue did not contain a page numbered 457. The last page with an Arabic number was 446. This article began 11 pages farther back and so, for convenience, it was assigned the number 457, for indexing purposes.)

To check the listings for the Proceedings, you turn to page P-3 where code 160 articles are listed. Nine articles on Work Sampling have appeared in the Proceedings. The most recent is "Using Work Measurement Sampling, Electronic Data Processing and Statistical Techniques to Establish an Indirect Labor Measurement Program" by W. A. Fatora, published in the 1966 Proceedings, beginning on page 229. For convenience, the title of this article has been abbreviated to "Indirect Labor Measurement" in the Index.

As with any such undertaking, errors are bound to be present; for these, we apologize. We wish to express our gratitude to AIIE and, in particular, to Roger Denney for his helpful comments.

W. E. Lewis, Editor
C. B. Gambrell
R. B. Waina

TABLE OF CONTENTS

CODE	SUBJECT	PAGES JOURNAL	PROCEEDINGS
100	Work Measurement	J-1	P-1
105	Procedures Preparatory to Work Measurement	J-2	P-1
110	Timing	J-2	P-1
